

POWER PROTEINS

PROTEIN FOODS CAN ALSO BE HIGH IN:

Zinc | zinc is also important for our immune system and can help with wound healing.

Iron | this important mineral also an important part of our immune system. Low levels of iron can make us feel tired.

Other important nutrients such as **calcium, vitamin D,** and **omega-3 fatty acids.**

WHY DO WE NEED PROTEIN?

Protein helps with:

- **healing** after a surgery or operation,
- supporting **blood sugar** levels,
- helping us to **feel full** after a meal,
- keeping our **immune system** strong
- helping to build **strength** and keep our muscles strong,
- elders - our muscle mass decreases with age so our protein needs go up. Keeping strong helps us with our **independence and mobility.**
